

# RR Item Creation

This RR Item Creation utility (Icreate) allows the user to define rules for the coding of the items (referred to as mask). The mask allows the coding of the item to be defined based on existing configuration structure in the system. For Example Department Code = %D, Category Code = %C so where you have %D{1}%C{1} this means Department code 1st digit followed by Category code 1st digit.

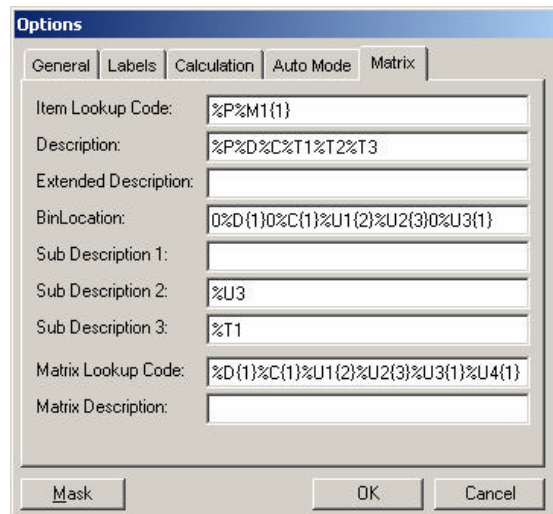

Icreate allows for the existing Matrix Headers and Details to be imported. In this program you can define codes for the details so that you can sort the report by code rather than alphabetically (example, small = Code 01, Medium = Code 02, Large = Code 03) Without RR codes it will print Large, Medium, Small.

The Icreate allows you to define either parent / child items or multi dimensional matrix items. Five custom fields can also be defined to be used for creation of structure codes (for example season, faulty goods, etc...)

ItemLookupCode	Description	Dim	Title1	Title2	Title3
0C1122230W	W/sock	3	Fit	Size	Style
1A	T Shirt	2	Material	Tint	
3000H	Hefest	3	Style	Size	Text
21001	Elastic Pant	1	Size		
21002	Elastic 9 Pocket Pant	2	Size	Style	

From the Item Tab you can select the “Matrix Lookup Code” which will display different Matrix Items with their associated Matrix headers. If you select the “Copy” function, this will allow you to create a new set of item that has same matrix header. Otherwise you can select the “Edit” Matrix item and add new dimensional details and combinations to an existing matrix, creating new items.

Options dialog box with tabs: General, Labels, Calculation, Auto Mode, Matrix.

Item Lookup Code: %P%M1{1}

Description: %P%D%C{T1}T2{T3}

Extended Description:

BinLocation: 0%D{1}0%C{1}%U1{2}%U2{3}0%U3{1}

Sub Description 1:

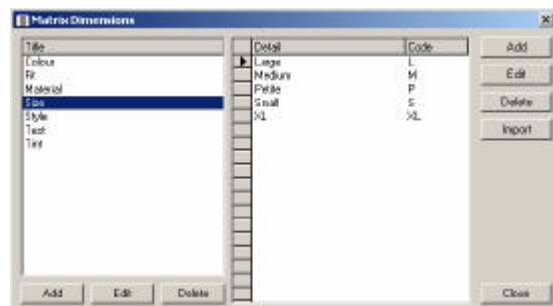

Sub Description 2: %U3

Sub Description 3: %T1

Matrix Lookup Code: %D{1}%C{1}%U1{2}%U2{3}%U3{1}%U4{1}

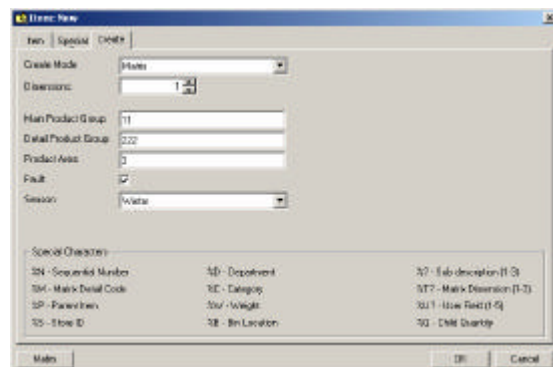

Matrix Description:

Buttons: Mask, OK, Cancel

After creating the item batch the items can be edited before they are applied to the Microsoft Retail Management System – Store Operation OR HQ. If applied to HQ the software will automatically generate a 250 Worksheet to be downloaded to all stores for the new items and Matrices.
